How to Use the Following Charts

View which job designations are used in your state. Be sure to follow the legal requirements to perform dental radiographic procedures. See which tasks are not permitted by state law. Review all the allowable tasks for each level of dental assisting as published in the state practice act.

View the education/training/credential required for each level of dental assisting. The numbers next to each task correspond to the 70 numbered tasks that were identified and used in the DANB/ADAA Core Competencies Study. Tasks that are not numbered do not directly match one of the 70 tasks, yet are identified by the state in the practice act. A full list of those tasks follow your state’s chart. See Appendix A for more information about the task numbering system.

Compare your state’s job designations to those used as standardized job titles in the DANB/ADAA Core Competencies Study. If your state’s dental practice act specifically defines levels of supervision, the state-specific definition is noted below the chart. See Appendix B for more information about supervision.

These data are presented for informational purposes only and are not intended as a legal opinion regarding dental practice in any state. DANB confers with each state’s dental board at least annually regarding the accuracy and currency of this information. To verify, or if you have any questions, please contact your state’s dental board.

NELDA®, CDA®, COA®, CRFDA®, CPFDA®, and COMSA®, are registered certification marks of the Dental Assisting National Board, Inc. (DANB). DANB®, Dental Assisting National Board®, RHS®, ICE®, and Measuring Dental Assisting Excellence® are registered service marks of DANB. CERTIFIED DENTAL ASSISTANT™ is a certification mark of DANB.

© 2017 Dental Assisting National Board, Inc.
To qualify to perform expanded functions, one must:
- Complete a course or program administered by or developed as part of the regular curriculum at a dental, dental hygiene, or dental assisting educational program accredited by CODA that provided training in the expanded function
- Successfully complete a Florida Board-approved expanded duties training program

Note: The DANB Certified Dental Assistant (CDA) certification was removed as a pathway to qualify to perform expanded functions in Florida effective May 2009. Dental Assistants who were employed in Florida and had earned the CDA prior to the effective date of this rule change are "grandfathered in" and are permitted to perform expanded functions in Florida. Contact the Florida Board of Dentistry for specific information about this rule change.

To monitor nitrous oxide inhalation analgesia, a dental assistant must:
- Complete a course of training of no less than two days as described in the American Dental Association’s “Guidelines for Teaching and Comprehensive Control of Pain and Anxiety in Dentistry” or equivalent
- Be certified in an American Heart Association, American Red Cross, or equivalent agency sponsored CPR course at the basic life support level, to include one man CPR, two man CPR, infant resuscitation, obstructed airway, and use of either an Automated External Defibrillator or a defibrillator and electrocardiograph, with a periodic update not to exceed two years

A dental assistant in the state of Florida may perform basic supportive dental procedures specified by the state dental practice act (see opposite page) under the supervision of a licensed dentist.

Note: On-the-job trained dental assistants in Florida must be trained in the dental office under the supervision of a licensed dentist who assumes full responsibility for assuring that the dental assistant so trained is competent to perform the tasks.

In order to legally operate dental x-ray equipment and perform dental radiographic procedures in the state of Florida, a dental assistant must either:
- Graduate from a Florida Board of Dentistry-approved dental assisting school or program
- Be state-certified as a dental radiographer by the Florida Department of Health (FDOH)

To obtain the dental radiography certification, one must:
- Successfully complete at least three months of continuous on-the-job training through assisting in the positioning of digital radiographic sensors and positioning and exposing of dental radiographic images under the direct supervision of a Florida-licensed dentist
- Successfully complete a Florida Board-approved radiology course within 12 months of completing on-the-job training

Apply to the FDOH for certification

The ADAA/DANB Alliance developed a listing of standardized job titles (left) based on its national Core Competencies Study conducted from 2002-2005.

The same study utilized a list of 70 job functions which were determined to be representative of a broad range of dental assisting core competencies.

Functions in this state that relate to the national DANB/ADAA Core Competencies Study are numbered to the right, using language directly from this state’s dental practice act. (The numbers correspond to the study’s task numbering system.)

Functions listed with bullets are part of this state’s practice act but are not specific matches to DANB/ADAA research.

These state templates reflect the work done by the ADAA/DANB Alliance to support a uniform national model for one set of dental assisting tasks, levels and requirements, which will serve as a viable career ladder for dental assistants.

Note: On-the-Job trained dental assistants in Florida must be trained in the dental office under the supervision of a licensed dentist who assumes full responsibility for assuring that the dental assistant so trained is competent to perform the tasks.

Functions NOT Permitted by Dental Assistants in FL
- Gingival curettage and root planing
- Taking impressions for the purpose of fabricating any intrarural restorations or orthodontic appliance
- Initial access preparation
- Any prescription of drugs or medical procedures requiring the written order of a licensed dentist or physician
- Any diagnosis for treatment or treatment planning
### Florida

#### Allowable Functions

**General Supervision:**
- A licensed dentist must examine the patient, diagnose a condition to be treated, authorize the procedure to be performed, and be on the premises while the procedure is performed.

**Direct Supervision:**
- A licensed dentist must examine the patient, diagnose a condition to be treated, authorize the procedure to be performed, be on the premises while the procedure is performed, and approve the work performed prior to the patient’s departure from the premises.

**Indirect Supervision:**
- A licensed dentist must examine the patient, diagnose a condition to be treated, authorize the procedure to be performed, and be on the premises while the procedure is performed.

**Under Direct Supervision**

1. Using appropriate implements for preliminary charting of existing restorations and missing teeth and a visual assessment of existing oral conditions
2. Packing and removing retraction cord, so long as it does not contain vasoactive chemicals and is used solely for restorative dental procedures
3. Polishing clinical crowns when not for the purpose of changing the existing contour of the tooth and only with burnishers, slow-speed handpieces, rubber cups, bristle brushes, and porto polishers, used with appropriate polishing materials
4. Selecting and pre-sizing orthodontic bands, including the selection of the proper size band for a tooth to be banded which does not include or involve any adapting, contouring, trimming, cementing, or otherwise modifying the band material such that it would constitute fitting the band
5. Taking and recording a patient’s blood pressure, pulse rate, respiration rate, case history and oral temperature
6. Placement and removal of cotton rolls
7. Instructing patients in oral hygiene care and supervising oral hygiene care
8. Applying topical anesthetics and anti-inflammatory agents which are not applied by aerosol or jet spray
9. Change bleach pellets in the internal bleaching process of non-vital, endodontically treated teeth after the placement of a rubber dam
10. Irrigation and evacuation of debris not to include endodontic irrigation
11. Placement and removal of cotton rolls
12. Removing excess cement from dental restorations and appliances with non-mechanical hand instruments only
13. Making impressions for study casts which are not being made for the purpose of fabricating any intraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
14. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
15. Selecting prescribed extraoral appliances by conditioning or placing of sealant materials which does not include placing brackets
16. Selecting and pre-sizing archwires prescribed by the patient’s dentist so long as the dentist makes all final adjustments to bend, arch form determination, and symmetry prior to final placement
17. Instructing patients in oral hygiene care
18. Applying topical fluorides which are not being made for the purpose of providing palatal coverage
19. Preparing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
20. Removing excess cement from dental restorations and appliances with non-mechanical hand instruments only
21. Applying cavity liners, varnishes, or bases
22. Selecting and pre-sizing archwires prescribed by the patient’s dentist so long as the dentist makes all final adjustments to bend, arch form determination, and symmetry prior to final placement
23. Placing or removing rubber dams
24. Making impressions for study casts which are not being made for the purpose of fabricating any intraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
25. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
26. Removing excess cement from dental restorations and appliances with non-mechanical hand instruments only
27. Making impressions for study casts which are not being made for the purpose of fabricating any intraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
28. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
29. Removing and recementing properly contoured and fitting loose bands that are not permanently attached to any appliance
30. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
31. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
32. Making impressions for study casts which are not being made for the purpose of fabricating any intraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
33. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
34. Making impressions for study casts which are not being made for the purpose of fabricating any intraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
35. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
36. Making impressions for study casts which are not being made for the purpose of fabricating any intraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
37. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
38. Making impressions for study casts which are not being made for the purpose of fabricating any intraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
39. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
40. Selecting and pre-sizing archwires prescribed by the patient’s dentist so long as the dentist makes all final adjustments to bend, arch form determination, and symmetry prior to final placement
41. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
42. Selecting and pre-sizing archwires prescribed by the patient’s dentist so long as the dentist makes all final adjustments to bend, arch form determination, and symmetry prior to final placement
43. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
44. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
45. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
46. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
47. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
48. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
49. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
50. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
51. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
52. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
53. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
54. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
55. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
56. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
57. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
58. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
59. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
60. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
61. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
62. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
63. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
64. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
65. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
66. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
67. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets
68. Selecting prescribed extraoral appliances by pre-selection or pre-measurement, not including final fit adjustment
69. Providing a tooth surface by applying conditioning agents for orthodontic appliances by conditioning or placing of sealant materials which does not include placing brackets

*General Supervision: A licensed dentist must examine the patient, diagnose a condition to be treated, and authorize the procedure to be performed.*
Appendix A: Numbering System for Dental Assisting Functions

The following list of 70 dental assisting tasks was developed by the ADAA/DANB Alliance as part of a study of dental assisting core competencies conducted between 2002 and 2005. These selected tasks were determined to be representative of a broad range of dental assisting core competencies.

The numbered functions listed in the preceding state charts correspond to functions that were included in the DANB/ADAA core competencies study and use language directly from the state’s dental practice act. The numbers are provided to facilitate comparison between and among states. Functions listed with bullets in the preceding charts are part of the state’s practice act but are not specific matches to the functions that were included in the 2002-2005 study.

1. Perform mouth mirror inspection of the oral cavity
2. Chart existing restorations or conditions
3. Phone in prescriptions at the direction of the dentist
4. Receive and prepare patients for treatment, including seating, positioning chair, and placing napkin
5. Complete laboratory authorization forms
6. Place and remove retraction cord
7. Perform routine maintenance of dental equipment
8. Monitor and respond to postsurgical bleeding
9. Perform coronal polishing procedures
10. Apply effective communication techniques with a variety of patients
11. Transfer dental instruments
12. Place amalgam for condensation by the dentist
13. Remove sutures
14. Dry canals
15. Tie in archwires
16. Demonstrate knowledge of ethics/jurisprudence/patient confidentiality
17. Identify features of rotary instruments
18. Apply topical fluoride
19. Select and manipulate gypsums and waxes
20. Perform supragingival scaling
21. Mix dental materials
22. Expose radiographs
23. Evaluate radiographs for diagnostic quality
24. Provide patient preventive education and oral hygiene instruction
25. Perform sterilization and disinfection procedures
26. Provide pre- and post-operative instructions
27. Place and remove dental dam
28. Pour, trim, and evaluate the quality of diagnostic casts
29. Size and place orthodontic bands and brackets
30. Using the concepts of four-handed dentistry, assist with basic restorative procedures, including prosthodontics and restorative dentistry
31. Identify intraoral anatomy
32. Demonstrate understanding of the OSHA Hazard Communication Standard
33. Place, cure and finish composite resin restorations
34. Place liners and bases
35. Place periodontal dressings
36. Demonstrate understanding of the OSHA Bloodborne Pathogens Standard
37. Take and record vital signs
38. Monitor vital signs
39. Clean and polish removable appliances and prostheses
40. Apply pit and fissure sealants
41. Prepare procedural trays/armamentaria set-ups
42. Place orthodontic separators
43. Size and fit stainless steel crowns
44. Take preliminary impressions
45. Place and remove matrix bands
46. Take final impressions
47. Fabricate and place temporary crowns
48. Maintain field of operation during dental procedures through the use of retraction, suction, irrigation, drying, placing and removing cotton rolls, etc.
49. Perform vitality tests
50. Place temporary fillings
51. Carve amalgams
52. Process dental radiographs
53. Mount and label dental radiographs
54. Remove temporary crowns and cements
55. Remove temporary fillings
56. Apply topical anesthetic to the injection site
57. Demonstrate understanding of the Centers for Disease Control and Prevention Guidelines
58. Using the concepts of four-handed dentistry, assist with basic intraoral surgical procedures, including extractions, periodontics, endodontics, and implants
59. Monitor nitrous oxide/oxygen analgesia
60. Maintain emergency kit
61. Remove permanent cement from supragingival surfaces
62. Remove periodontal dressings
63. Place post-extraction dressings
64. Fabricate custom trays, to include impression and bleaching trays, and athletic mouthguards
65. Recognize basic medical emergencies
66. Recognize basic dental emergencies
67. Respond to basic medical emergencies
68. Respond to basic dental emergencies
69. Remove post-extraction dressings
70. Place stainless steel crown
An important consideration in the discussion of the delegation of tasks to dental assistants is that of supervision of dental assistants by their dentist-employers. The American Dental Association (ADA) has identified five levels of supervision for dental auxiliaries, including dental assistants, which it defines in its “Comprehensive Policy Statement on Allied Dental Personnel,” (2010: 505) which is part of its Current Policies, last updated in 2015. Note that “allied dental personnel” refers to dental assistants, dental hygienists, community dental health coordinators and dental laboratory technicians.

The five levels of supervision defined by the ADA are as follows:

**Personal supervision:** A type of supervision in which the dentist is personally operating on a patient and authorizes the allied dental personnel to aid treatment by concurrently performing a supportive procedure.

**Direct supervision:** A type of supervision in which a dentist is in the dental office or treatment facility, personally diagnoses and treatment plans the condition to be treated, personally authorizes the procedures and remains in the dental office or treatment facility while the procedures are being performed by the allied dental personnel and evaluates their performance before dismissal of the patient.

**Indirect supervision:** A type of supervision in which a dentist is in the dental office or treatment facility, personally diagnosed and treatment planned the condition to be treated, personally authorizes the procedures, and remains in the dental office or treatment facility while the procedures are being performed by the allied dental personnel, and will evaluate the performance of the allied dental personnel.

**General supervision:** A type of supervision in which a dentist is not required to be in the dental office or treatment facility when procedures are provided, but has personally diagnosed and treatment planned the condition to be treated, has personally authorized the procedures, and will evaluate the performance of the allied dental personnel.

**Public Health Supervision:** A type of supervision in which a licensed dental hygienist may provide dental hygiene services, as specified by state law or regulations, when such services are provided as part of an organized community program in various public health settings, as designated by state law, and with general oversight of such programs by a licensed dentist designated by the state.

Furthermore, the ADA’s “Comprehensive Policy Statement on Allied Dental Personnel” stipulates that intraoral expanded functions should be performed by allied dental personnel “under the supervision of a dentist.”

Because the study of dental assisting core competencies undertaken by the ADAA/DANB Alliance did not address the question of supervision, the ADAA/DANB Alliance does not make any recommendations as to the levels of supervision that should be necessary for the delegation of the tasks included in the study to dental assistants. However, the ADAA/DANB Alliance believes it is important to call attention to the fact that, while the ADA has defined supervision levels in the aforementioned policy statement, which governs the ADA’s own activities and the activities of its members, these definitions have not been uniformly adopted by the dental boards of every U.S. state or district.

For the purposes of the attached charts, if a state’s dental practice act specifically defines levels of supervision, the state-specific definition is noted in the footer of the second page of the state chart.
